

1 Instruction of Buttons

2 Overview of components

3 Matters need attention

Power button

Touch to turn on/off

Fan & water button

Convection of air and water, prevent bacteria growth & maintain the oxygen content in water (this soil cultivation device is without the water pump)

Vegetables mode

Suitable for most leafy vegetables or foliage plants.

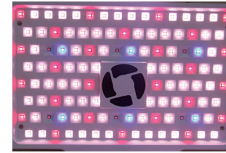

Flowers and fruits mode

Suitable for most flowering and fruiting plants.

Smart panel

Plant fill light lamp

Planting basket

Planting water tank

Adjustable Support Rod

Power adapter

Note: all buttons are opened/closed by one touch.

- 1: Please use the power adapter with output voltage of 12V and current of 3A to charge.
- 2: Keep the distance between lamp board and plant at 10cm during planting.
- 3: Can add solid fertilizer into the planting basket or add nutrient solution into the water tank in a proper way.
- 4: After starting up, the lamp board runs for 18 hours and stops for 6 hours and work in a cyclic manner like this. The fan work for 30 minutes and stop for 30 minutes and work in a cyclic manner like this.

- ① It is strictly forbidden to assemble the equipment when it is under power.
- ② Don't let the lamp board touch water.
- ③ It is strictly forbidden to dismantle or refit the equipment privately.
- ④ Keep the water tank clean.
- ⑤ Pay attention to the plant branches and leaves not reach into the fan position.
- ⑥ The time for automatic starting and shutting of light will have several minutes' deviation, which belongs to normal phenomenon.

4 Method for planting seedlings

1

Take out the planting basket, penetrate the cotton rope into the cotton rope hole.

2

Add proper soil into the planting pot, lift the cotton rope up a little to let the cotton rope in the middle of the soil when adding soil, increase the contacting area between cotton rope and soil.

3

Can place various plants into the planting basket .Pay attention to the height of plants and don't let the branches and leaves reach into the fan.

4

Place the planting basket into the water tank. Insert the Adjustable Support Rod into the relevant holes on lamp board and water tank.

5

Rotate and open the filler cap and add water to the water tank, pay attention that the water level can not be higher than 2L.

6

Switch on the power and wait to mature (observe the water level, if the water level is low, add water into the tank. And add nutrient solution into the water tank according to the needs of the plants).
